BASIC-ABSTRACT:

The output voltage of **eddy current converter (3)** carries information of the **condition of the base before application of the coating** and the voltage is converted, before being passed to store (9). The voltage from **eddy current converter (2)** carries information of the **same section of the base after application of the coating**. The obtained information from both **eddy current** converters is processed together, to judge **thickness** of the coating.

USE - Measurement of **thickness** of coatings. Bul. 46/15.12.90 @(3pp)@
